

Project Design Phase-II

Data Flow Diagram & User Stories

Date	28 October 2026
Team ID	SWTID-2026-6819
Team Leader	Hazna Mariyam. H
Team Members	Anuskha. K Theras Jasmine. M
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

1. User Stories & Acceptance Criteria

User Story 1: Hardware Engineering Team

As a member of the IT Hardware Procurement team,

I want catalog tasks to be automatically generated and assigned to the Hardware group upon request approval,

So that my team can immediately begin device configuration without waiting for manual ticket creation or triage.

- **Acceptance Criteria:**

1. A Catalog Task (*sc_task*) is created automatically as soon as the parent request receives approval.
2. The Assignment Group is automatically populated as Hardware.
3. The Short Description and Description fields display *"Laptop need to Configured"*.
4. The Approval status on the task record is set to Approved.

User Story 2: Employee / Requester

As an employee ordering a standard laptop from the Service Catalog,

I want my request workflow to execute automatically without manual administrative bottlenecks,

So that my laptop is configured and provisioned within SLA targets.

- **Acceptance Criteria:**

1. Requesters can search and select Standard Laptop under Service Catalog -> Hardware.
2. Submitting the order generates a Requested Item (`sc_req_item`) record linked to a Request (`sc_request`).
3. The requester can track real-time progress as approvals are granted and tasks are created.

User Story 3: IT Administrator / Platform Manager

As an IT Administrator,

I want to replace legacy business scripts with a low-code Flow Designer workflow running under System User context,

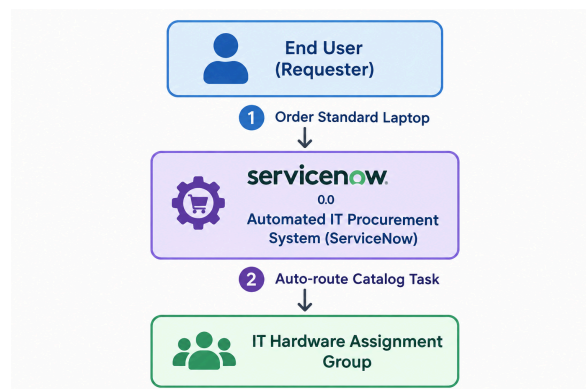

So that platform performance is optimized, security risks are minimized, and process updates require zero custom code maintenance.

- **Acceptance Criteria:**

1. The workflow runs reliably under System User permissions without privilege escalation issues.
2. The flow is cleanly bound under Maintain Items -> Process Engine for the Standard Laptop catalog item.
3. Execution logs are fully traceable within Flow Designer history for operational auditing.

2. Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

End User

(Submits Form)

Process 1.0 : Order Submission

- User selects 'Standard Laptop' in Service Catalog.
- Click 'Order Now'.

Writes Request Data

Data Store D1 : Requested Item Table
(`sc\_req\_item`)

Trigger Event: Service Catalog Request Approved

Process 2.0 : Flow Designer Execution (`Standard laptop task`)

- Listens for approved `sc\_req\_item`.
- Runs under System User context in Global Application scope.

Maps & Passes Record Payload

Process 3.0 : Create Catalog Task Action

- Drag & Drop `sc\_req\_item` Record.
- Set Short Description = "Laptop need to Configured"
- Set Description = "Laptop need to Configured"
- Set Assignment Group = "Hardware"
- Set Approval = "Approved"

Writes Created Task Data

Data Store D2 : Catalog Task Table
(`sc\_task`)

Reads Task & Begins Hardware Configuration

Hardware Group

3. Data Dictionary & Field Mappings

Process Step	Source Field / Entity	Target Field / Entity	Value / Transformation Rule
Trigger	Service Catalog	Flow Standard laptop task	Initiated on catalog order submission.
Task Creation	sc_req_item Record Data	sc_task.request_item	Data Pill reference link from parent request item.
Field Mapping	Static Input	sc_task.short_description	Set to "Laptop need to Configured".
Field Mapping	Static Input	sc_task.description	Set to "Laptop need to Configured".
Routing	Group Lookup	sc_task.assignment_group	Set to "Hardware".
State Mapping	State Choice	sc_task.approval	Set to "Approved".
