

Project Design Phase Proposed Solution

Date	28 October 2026
Team ID	SWTID-2026-6819
Team Leader	Hazna Mariyam. H
Team Members	Anuskha. K Theras Jasmine. M
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	The current IT procurement process lacks efficiency and automation, resulting in delays and manual overhead, particularly in handling standard laptop orders. Requests for standard laptops require manual triage, routing, and configuration assignment. This step is prone to oversight and delays, leading to high user wait times and inefficient resource allocation within the IT department.
2.	Idea / Solution description	The proposed solution utilizes ServiceNow Flow Designer to build a low-code automated workflow (Standard laptop task) triggered automatically upon Service Catalog order approval. The flow dynamically generates a Catalog Task (sc_task), sets the Short Description and Description to <i>"Laptop need to Configured"</i> , assigns it directly to the Hardware assignment group, and sets the approval state to <i>Approved</i> .
3.	Novelty / Uniqueness	Low-Code Architecture: Eliminates complex legacy JavaScript business rules and workflows with zero custom code maintenance. Contextual Execution: Runs under System User context in the Global application scope, eliminating privilege escalation errors. Zero-Delay Task Routing: Instantly dispatches task records directly to the Hardware engineering queue without manual dispatcher intervention.

4.	Social Impact / Customer Satisfaction	Employee Productivity: Drastically reduces user wait times for standard hardware during employee onboarding and hardware refreshes. Reduced Operational Friction: Eliminates manual ticket triaging for IT helpdesk engineers, allowing them to focus on core hardware setup. Data Quality & Transparency: Standardizes setup parameters and provides real-time progress visibility across the fulfillment lifecycle.
5.	Business Model (Revenue Model)	Cost Savings via Efficiency: Reduces administrative operational costs by eliminating manual task routing overhead. SLA Compliance Optimization: Prevents SLA breaches and penalty costs in enterprise IT service delivery. Scalable Enterprise Template: Functions as an internal reusable procurement pattern across other hardware categories (e.g., mobile devices, monitors, peripherals).
6.	Scalability of the Solution	Horizontal Platform Scaling: Built natively on ServiceNow's cloud platform, handling high-volume concurrent procurement orders effortlessly. Extensible Workflow Design: Easily adaptable to include additional automation steps like asset tracking (alm_hardware), automated email notifications, or vendor API integrations.
